Battle of Royalley is a mod that asks a simple question: what would you get if you took Stardew Valley, the nicest thing ever, and added a ton of murder? I don't know because I couldn't make it work. According to PC Gamer, the surprisingly calm and cheerful Stardew Valley, apparently, now has a combat grand piano mod, the brainchild of a vile modder named Ilyaki. Instead of crops, the goal is now to farm human souls in a battle between 100 farmers. I have fond memories of using stardew online to relax with my latest girlfriend, and I know my colleague Geeta Jackson feels a calm way to wind down after a hectic night. This mod throws it all out the window. Presumably, you'll need a few things to get mod runs including Mod itself and SMAPI, an API that is used to run the game with all the extra mods and goodies. The fashion page also recommends an online browser to search for games. It's a tangle of different programs and downloads that's a little hard to manage. As a result, like the people at Rock, Paper, Shotgun, I found myself unable to play Battle Royalley. The browser server works quite well with the usual Stardew Valley, but not with the mod. Either people don't play, I've done something wrong, or fashion just isn't interacting properly at the moment. Dedicated tech heads may understand this and sneak into some pixel-farm killing, but judging by the comments on NexusMods, some players are still having trouble joining. There is a video posted by Ilyaki showing off a snippet of gameplay and one comment suggesting that it is playable, although the game area is shrinking so quickly. At this point, we had a royale battle of all stripes. Aside from the best dogs like Fortnite and PUBG, there were things like sweeping heights, fantasy-themed Realm Royale, and floppy disks of fully accurate battlefields. Battle Royale is coming to almost every major game like Battlefield V, so I think we might as well add it to the most adorable farming sim of late. If I can play one day, I'll tell you what it's like. Image via Nexus Mods There's a quirky little action RPG buried somewhere in Stardew Valley, although wrestling has never been the focus of the game. But that hasn't stopped Modder Ilyaki from creating a combative royal fashion for him - and yes, of course, it's called Battle of the Royals, what else? The Battle of Royalley is exactly what it sounds like: a Battle Royale-style fight-to-death set in the peaceful OL 'Stardew Valley. All will be scattered across the Stardew Valley at the beginning of the game, said Ilyaki on Nexus Mods. You can find swords, slingshots, bombs, healing items and sometimes horses or even hats in chests generated around the map. Chop trees and craft fences for use as cover. I wonder if developer Eric 'ConcernedApe' Baron saw this coming when he first announced Valley multiplayer? It's pretty simple as the Battle of the Royale goes, but the battle of Royalley has chests loot and bushes to hide behind, and and as far as I'm concerned it's the meat and potato battle of the Royale. Hell, he even got a player killing a storm that closes as time goes on. (Ilyaki advises unlocking mines, a railway and a beach bridge in the world to facilitate access.) MOD also supports up to 100 players, provided you link with its settings and convince 99 of your closest friends to set the thing up. Most importantly, it finally allows us to say the following line with full seriousness: the last farmer stood winning. The question is, could you somehow pair it with the armitexes fashion for unlimited multiplayer players to create the largest agriculture free for everyone in history? Probably not, but man, that would be great. Eric Baron puts his new game on hold and forming a new development team so he has time to do more stardew Valley. Gaming Last Farmer stood winning. By Amanda Yeo 8 January 2019 Stardew Valley, a video game in which you fix a rundown farm to satisfy the ghost of your dead grandfather, is a gentle game. Players clean the land, up the soil, and usually their crops, selling products to save up for home repairs. However, in an era when every video game relevance should have a royale combat mode, nothing is sacred - even an innocent farming simulator. Created by Stardew Valley modder Ilyaki, Battle Royalley is a fashion that turns a peaceful valley into a murder of violence and death. Up to 100 farmers are placed around the map at the beginning of the round, and must struggle to be last, standing as the boundary card gradually shrinks the playable area. Farmers can attack each other with swords, slingshots, bombs and anything else they can loot from chests scattered across the map. Like Fortitude, Battle Royalley also includes an element of construction. Farmers can chop down trees and craft fences to use them as cover, or hide behind foliage to ambush people. Horses are also available to provide a quick means of making a quick escape - or hunting your prey. Although there is an element of struggle in the unalidized Stardew Valley, it is aimed at creatures such as Slimes, bats and skeletons that are usually found in mines north of the map. Man-on-human swordplay is not a phenomenon familiar to the inhabitants of the valley, a game that doesn't even allow you to slaughter animals for meat (although there's a mod for that in a good way). Unfortunately, joining a rural brawl seems to be a bit of a test right now, as kotaku and Rock, Paper, Shotgun attempts to get Battle of Royalley up and running were useless. It sounds as though there may be a few issues to iron out, but it's no surprise considering the fan project has just been released. If you want to give it a go yourself, you can download Battle Royalley and find instructions to run it on Nexus Mods. tagsbattle royale it inevitable, isn't it? Stardew Valley, which added multiplayer last year, is now a battle of Royale Mod called Battle Royalley. With enough Start using it, you should be able to join the 100-player fighting to death, complete with looted chests housing swords, bombs, slingshots and healing items. The last farmer standing wins. Players will spread across the map at the beginning of each round, and the game area will gradually shrink until, eventually, the battle is limited to a small corner of the map. You can chop down trees and craft fences to use as cover, hide behind bushes for a sudden attack, and jump on a horse to gallop from the sticky stain. If you have a server, you can choose where the storm closes, and choose the placement of the chest and place the player's caviar. Instructions on how to do this, along with a file setup for fashion, can be found on its Nexus page. If you host a side, you can also choose how many players you want to join the match. The author of The Fashion Ilyaki offers 100 -I'm not sure how well it will work (Stardew Valley defaults to four multiplayer players, although you can zoom in on that with mods), and presumably it will be rare to get that many people play mods right away. But that's something that can take off, and at that point you'll probably be able to find a full game. Here's a quick clip of what to expect. If you have combative royale fatigue but you still want a Stardew Valley mod, check out Tom's list of the best mods here. And if you want to focus on multiplayer, Lauren's guide to the best tips and mods lives here. It would seem no game is immune to the popular gameplay mode, which is a battle royale. Now even farmers can fight to the death thanks to the fashion developed for the PC version of Stardew Valley. Available on Nexus Mods and entitled Battle Royalley, the mod allows groups of up to a hundred players, depending on the server on which you are on, duke it out in a slowly shrinking arena. Not unlike the battle of royale heavyweights PUBG and Fortnite. However, given the overhead view of the game, racking kills means getting up close and personal, as seen in this short teaser: Spread across the map at the beginning of the match, players have several strategy options, from cutting down trees to fences to being used as cover, hiding behind bushes to commandeering horses to escape from danger. Weapon wise, players can choose from swords, slingshots and bombs to pull other players, with prey chests and healing items to be found all over the map. If you want to host a server, you can choose where the card starts to shrink, the number of players and their spawn locations, and the placement of loot chests. While fashion author Ilyaki offers the player a number of a hundred, it remains to be seen how the game performs at that number, given the existing Stardew Valley multiplayer stake of just four (this can also be changed). Multiplayer for PC and Switch version of Stardew Valley launched Last month, game creator Eric Baron said that rolling out the multiplayer PS4 and Xbox One is a top priority. Installation instructions Stardew Royalley can be found on the Nexus mod page. Last updated: January 7, 2019
